FOR IMMEDIATE RELEASE

Windsor Announces Autoscrubber That Extends Solution Usage By 35 to 50% Between Tank Fill Ups

Denver, Co – Windsor Industries, a Castle Rock Industries company, today announced its Saber Cutter walk-behind autoscrubber with the exclusive Aqua-Mizer™ system. The Aqua-Mizer extends scrubbing times between refills by using cleaning solutions more efficiently, without requiring special detergents or foaming surfactants.

Employing a patented design, Aqua-Mizer keeps solution in the scrubbing area longer, allowing flow to be set at the lowest level and still provide enough solution to do the cleaning job. This increases run-time productivity by 35 to 50% per tank fill up. Aqua-Mizer is standard on all Saber Cutter models.

The Saber Cutter line offers a series of automatic scrubbers with a range of cleaning widths and performance options that can be custom fit to any application. Cleaning widths range from 26 inches (66 cm) to 32 inches (81 cm) and are designed for commercial and industrial applications.

The Saber Cutter features an ergonomic sloping design that gives the operator a greater view of the work area, thereby providing enhanced safety. The units have an intuitive control panel with all operation functions within easy reach, to reduce training times and increase operator productivity. The Saber Cutter also provides the industry's first patented built-in accessory compartment to hold cleaning supplies, pads or brushes.

In addition to autoscrubbers, Windsor Industries manufactures a complete line of vacuums, extractors, sweepers, burnishers and floor machines.
